An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's representative Karin Williams on 07/28/2010.

The application has been amended as follows:

Claim 21:

In line 5: "a" before "first signal" has been replaced with -the-.

In line 7: "a" before "second signal" has been replaced with -the-.

In line 9: "a" before "third signal" has been replaced with -the-.

The following is an examiner's statement of reasons for allowance:

Claim 14 recites, "receiving a plurality of signals, having a plurality of different formats, at a single source interface, wherein at least a first signal, a second signal and a third signal are received at said single source interface; routing the first signal, the second signal and the third signal from the single source interface to one or more selected devices; converting the first signal, routed from the single source interface, said first signal being an analog signal to a desired format; converting the second signal, routed from the single source interface, said second signal being a digital signal to the desired format; demultiplexing a the third signal in the desired format, said third

signal having an audio component and a video component; packetizing the first, second and third signals; and multiplexing the first, second and third signals into a single transport stream," which are unique features not disclosed by prior art.

Claims 15-18 and 20 are allowed because they depend either directly or indirectly on claim 14 above.

Claim 21 recites, "a single source interface having one or more input terminals to receive the plurality of signals having a plurality of different formats, wherein at least a first signal, a second signal and a third signal are received at said single source interface; a first converter to convert the first signal, said first signal being an analog signal among the plurality of signals~ to a desired format; a second converter to convert the second signal, said second signal being a digital signal among the plurality of signals~ to the desired format; a demultiplexer to demultiplex the third signal in the desired format among the plurality of signals, said third signal having an audio component and a video component; a packetizer coupled to the demultiplexer, and the first and second converters, said packetizer to packetize the first, second and third signals; and a formatter coupled to the packetizer, said formatter to multiplex the first, second and third signals into a single transport stream," which are unique features not disclosed by prior art.

Claims 23-27 are allowed because they depend either directly or indirectly on claim 21 above.
